Playwright Suite Audit

Fixed-scope audits for Playwright suites your team has stopped trusting: every finding tied to a file and line, every fix ranked by impact.

€1,650 flat fee, confirmed in a written quote

🕒 Report within 10 business days of repo access

The problem

Your end-to-end suite is red for reasons nobody can explain, CI takes too long, and the team re-runs jobs until they pass. I review the suite and the pipeline and hand you a prioritised fix list.

☆ For: Engineering managers and QA leads whose Playwright suite is slow, flaky or not trusted

What I do

A fixed-scope review of the suite, its config and the CI pipeline, plus the flaky-test history of your last 30 days of runs. You get a written report where each finding has a severity, file and line evidence, the fix and an effort estimate, and a debrief call to walk through it.

What you get

- ✓ Kickoff call (45 min) to agree the scope and the pain points
- ✓ Read-only review of the Playwright suite, config and CI pipeline
- ✓ Flaky test analysis from your last 30 days of CI runs
- ✓ Written report: findings ranked by impact and effort, with code-level examples
- ✓ Debrief call (60 min) to walk through the report

Not included

- ⊗ Implementing the fixes (can be quoted separately after the debrief)
- ⊗ Frameworks other than Playwright
- ⊗ Load or security testing

What I need from you

- ✓ Read-only access to the test repository and CI history
- ✓ One engineer available for the two calls

How to start

1 Fit call

Free 30 min 2 **Paid diagnostic**

€390 one-time

A short call to look at your setup. If an audit is not the right fix, I say so on the call.

For teams not ready to share code yet. Conversation and documents only, no repo access. The fee is credited in full against the audit if you book it afterwards.

3 Playwright Suite Audit

€1,650 flat fee, confirmed in a written quote

4 Fix Sprint

Quoted after the debrief

Report within 10 business days of repo access.

Optional follow-on: I implement the top findings from a delivered audit as pull requests on your repository.

Proof

A full sample report on a public suite: 10 findings (3 high, 4 medium, 3 low)

Each finding links to the file and line it is about, with the fix and an effort estimate.

Source: Sample report, 2026-10-01

The audited demo suite: 8 tests on 3 browser engines, 24 of 24 passing in CI

Page objects, fixtures, test-id locators and no fixed waits.

Source: CI run on main, 2026-10-05

Finding H1 from the sample report has since been fixed; H2 is still open

A weekly scheduled CI run now keeps the green badge current (commit d0221dc).

Source: playwright-e2e-demo history

Open-source locator fallback engine: when a test id is removed, it recovers the element by role and reports the match as healed

11 automated tests passing; published on PyPI as self-healing-browser-mcp 0.1.0.

Source: Local demo run, 2026-10-10

Terms in short

The report is accepted on delivery unless you raise concrete gaps against the agreed scope within 5 business days; I then correct them once at no cost. Your code, CI logs and the report stay confidential and are never used as a public sample without written permission.
